

API QA Test Report

TaskFlow REST API · Postman, Newman and pytest verification · Release candidate 1.0

Portfolio disclosure
TaskFlow is a fictional QA target built for demonstration. The historical defects below are seeded examples, not claims about a real client.

13 REQUESTS EXECUTED	44 POSTMAN ASSERTIONS	0 FAILED ASSERTIONS	11 / 11 PYTEST CHECKS PASSED	7.9 ms AVG. LOCAL RESPONSE
-------------------------	--------------------------	------------------------	---------------------------------	-------------------------------

Objective Verify core API behavior, error handling, response contracts and a create-to-delete workflow before release. Coverage Health, login, bearer authorization, validation, pagination, user lookup, task creation and deletion.	Release recommendation PASS — suitable for demonstration release. All 44 Newman assertions and 11 pytest regression checks passed. No open seeded defects remain in this version.
---	--

Test Coverage Matrix

Status and expected behavior for each request in the recorded Newman run.

ID	Area	Method	Endpoint	Scenario	Expected result	Type	Status
TF-001	System	GET	/health	Service health check	200 with status and version	Smoke	Pass
TF-002	Authentication	POST	/auth/login	Valid credentials	200 with bearer token	Positive	Pass
TF-003	Authentication	POST	/auth/login	Invalid password	401 with explicit error	Negative	Pass
TF-004	Authentication	POST	/auth/login	Missing password	422 with validation detail	Negative	Pass
TF-005	Authorization	GET	/users	Missing bearer token	401 with token error	Negative	Pass
TF-006	Users	GET	/users?page=1&page_size=2	Valid pagination	200 with two users and metadata	Positive	Pass
TF-007	Users	GET	/users?page=0	Invalid lower boundary	422 with boundary error	Boundary	Pass
TF-008	Users	GET	/users/1	Existing user	200 with expected user contract	Positive	Pass
TF-009	Users	GET	/users/999	Unknown user	404 with explicit error	Negative	Pass
TF-010	Tasks	POST	/tasks	Valid task	201 with preserved values	Positive	Pass
TF-011	Tasks	POST	/tasks	Title below minimum length	422 with validation detail	Boundary	Pass
TF-012	Tasks	DELETE	/tasks/101	Delete existing task	204 with empty body	Workflow	Pass
TF-013	Tasks	POST	/tasks	Invalid priority value	422 with priority enum validation detail	Negative	Pass

Defect Verification

Seeded defect history shows how findings are prioritized, communicated and retested after a fix.

ID	Severity	Area	Finding	Previous behavior	Expected behavior	Resolution	Verification
QA-001	High	Authentication	Missing password caused server error	POST /auth/login returned 500	Return a client validation error	Fixed in demo v1.0	Retested: 422 Pass
QA-002	Medium	Users	Page zero was accepted	GET /users?page=0 returned 200	Reject invalid pagination boundary	Fixed in demo v1.0	Retested: 422 Pass
QA-003	Medium	Users	Unknown user returned null	GET /users/999 returned 200 with null	Return explicit not-found response	Fixed in demo v1.0	Retested: 404 Pass
QA-004	Low	Tasks	Created task used wrong status	POST /tasks returned 200	Return 201 Created	Fixed in demo v1.0	Retested: 201 Pass

High Core workflow or reliability risk	Medium Incorrect behavior with a viable workaround	Low Contract or standards inconsistency
---	---	--

Method and Deliverables

1	Understand the contract	Review Swagger/OpenAPI, authentication, environments, business rules and success criteria.
2	Design coverage	Map happy paths, negative paths, missing/invalid fields, boundaries, status codes and response schemas.
3	Execute and automate	Build an organized Postman collection, capture variables, write assertions and execute with Newman.
4	Report findings	Log severity, exact reproduction steps, expected/actual behavior, evidence and business impact.
5	Verify fixes	Rerun affected cases and regression coverage, then provide a release recommendation.
